

Solutions for unmanned gates

Allow guests to access unguarded gated communities with ease. ISN Smart Kiosks enable guests to scan either printed or digital passes on their smartphone. The new driver license access feature allows visitors to scan the back of their driver license for preapproved access. Many add-ons options are available.

ISN Smart Kiosks are available in three configurations:

Standard Kiosk

The ISN Standard Kiosk allows easy entry for guests and visitors with QR code and the new driver license scanning system. When access is granted, the gate opens, the host is notified and the transaction is logged.

- Scan QR code (on phone or printed)
- After access, host is notified and the transaction is logged
- Full Integration with ISN Software suite
- **New driver license access:**

Resident enters exactly the name on the visitor's driver license. When arriving the visitor will scan the back of their driver license and the system will match to the smart kiosk database for access.

Remote Screening Kiosk

The Remote Screening Kiosk brings all the features of the Standard Kiosk with added two-way audio and one way video communication to the main gate.

- All features from ISN Basic Kiosk plus,
- Remote video screening from main gate
- Can be integrated to central station
- Will capture driver license picture as well as driver license search
- Optional motion sensor to greet visitors

Full Featured Kiosk

The ISN Full Featured Kiosk combines all the capabilities of the Remote Screening Kiosk with the two way communication with community residents and more.

- All features from ISN Remote Screening Kiosk plus,
- Key Pad access
- Call residents for direct access
- Integrated screen will call up to 3000 residents
